

# CASE STUDY

WHAT

**ArticuLock®**

WHERE

**Norwegian North Sea**

WHEN

**Q2 2019**

WITH

**MODU Semi Submersible**

WHO

**Unnamed**

WATER DEPTH

**115m**

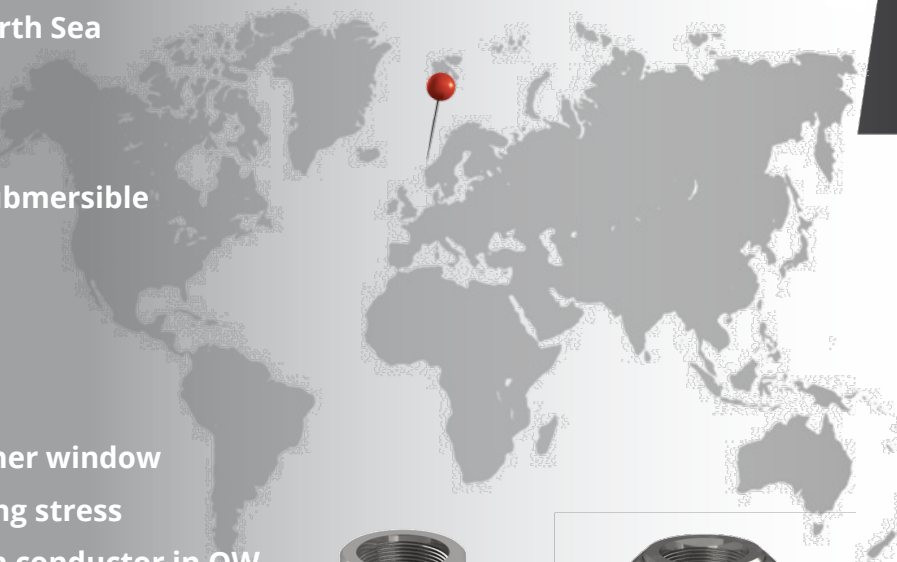

WHY

**Open up weather window**

**Remove bending stress**

**Transit rig with conductor in OW**

**Save Rig Time**

## CHALLENGE

The client was sailing the rig with a 36" x 30" conductor string suspended beneath with a limited weather window, requiring a tool to stabilise the conductor string.

## SOLUTION

ArticuLock was used to de-couple the fixed MODU from the hanging conductor, enabling moving the rig in up to 4.5m Hs.

## RESULTS

The 100MT conductor was suspended beneath ArticuLock for 34hrs during rig transit at up to 1.5 knots.

An allowable weather window for sailing the rig with conductor suspended underneath ArticuLock successfully opened up to 4.5m Hs wave height.
